II-2.04 Data Retention Policy

The Universities at Shady Grove is hereinafter referred to as "USG" and the Office of Information Technology as “OIT.”

1.0 Purpose

The purpose of this policy is to specify guidelines in which identifies when data is no longer of value or use to USG, the process of retention, and when and how data should be purged.

2.0 Scope

The scope of this policy covers all USG data stored on USG-owned, USG-leased, and otherwise USG-provided systems and media, regardless of location.

Note that the need to retain certain information may be mandated by local, industry, or federal regulations and applicable laws. Where this policy differs from applicable regulations, the policy specified in the regulations will apply.

3.0 Policy

3.1 Reasons for Data Retention

USG does not wish to simply adopt a "save everything" mentality. That is not practical or cost-effective, and would place an excessive burden on the organization to manage the constantly-growing amount of data.

Some data, however, must be retained in order to protect USG's interests, preserve evidence, and generally conform to good business practices.

3.2 Data Duplication

As data storage increases in size and decreases in cost, companies often err on the side of storing data in several places on the network. A common example of this is where a single file may be stored on a local user's machine, on a central file server, and again on a backup system. When identifying and classifying USG's data, it is important to also understand where that data may be stored, particularly as duplicate copies, so that this policy may be applied to all duplicates of the information. For example, data copied to USB flash drives or printed out is considered a copy under this policy and must adhere to the retention schedule in this policy (See Appendix A).

The Universities at Shady Grove

Policy Type: IT Security Policy

Section III: Data Security

PUBLIC

All work data sets must adhere to the retention schedule in the policy (See Appendix A). Data may be further retained in archives or backups based on USG Backup Policy.

3.3 Retention Requirements

This section sets general guidelines and requirements for retaining the different types of data sets stored and utilized by USG. USG may be required to retain data sets for longer or shorter periods as required by others policies, laws and regulations, legal action, intellectual property, or incident and other internal investigations. Please refer to Appendix A of this policy for the official retention schedule for each type of data or data set.

If any information retained under this policy is stored in an encrypted format, considerations must be taken for secure storage of the encryption keys. Encryption keys must be retained as long as the data that the keys decrypt is retained.

4.4 Data Destruction

Data destruction is a critical component of a data retention policy. Data destruction ensures that large amounts of data do not overburden USG’s IT resources, which make data management and data retrieval increasingly complex and expensive, and protects the campus from litigation or consequences due to violation of other policies and regulations. In conjunction with this policy data must be destroyed in accordance with the USG Data Classification Policy (II-2.02), as well as, comply with this policy’s data retention schedule (see Appendix A).

Data destruction exemptions maybe granted under normal circumstances by the Director of OIT. If a user feels that certain data should not be destroyed, he or she should identify the data to his or her supervisor to be considered for an exemption.

USG specifically directs users not to destroy data in violation of this policy. Particularly forbidden is destroying data that a user may feel is harmful to himself or herself, or destroying data in an attempt to cover up a violation of law or USG policy. Destruction of data is not permitted when the data or data set is involved in the following:

- Litigation (criminal or civil)
- Accident investigation
- Security incident investigation
- Violation of regulatory requirements

5.0 Enforcement

The enforcement of this policy will be carried out by authorized USG OIT personnel designated by the Director of OIT and USG Senior Leadership. Violations may result in disciplinary actions, which may include suspension, restriction, or revocation of access. Where illegal activities or theft of USG property (physical or intellectual) are suspected, USG may report such activities to the state/federal law enforcement authorities.

5.0 Definitions & Terms

Backup - To copy data to a second location, solely for the purpose of safe keeping of that data.

Data Retention – To keep or retain a piece or set of data for a specific purpose or reason in relation to an organizations business needs

Data Destruction – To permanently destroy a piece or set of data

Encryption - The process of encoding data with an algorithm so that it is unintelligible and secure without the key. Used to protect data during transmission or while stored.

Encryption Key - An alphanumeric series of characters that enables data to be encrypted and decrypted.

Working Data Set – any set of data elements which have not been achieved and have the potential to be used by the campus regularly for continual campus operations. This specifically excludes backup or archived data sets.
